Disposable Respirator KN 95

Filtering face piece respirators (FFR), which are also called disposable respirators, are subject to various regulatory standards around the world (see examples below). Certain required physical properties and performance characteristics are specified in order for respirators to claim compliance with the particular standard. N95/KN95/FFP2.

- N95 (United States NIOSH-42CFR84)
- KN95 (China GB2626-2006)
- FFP2 (Europe EN 149-2001)

Materials

The following materials are used in the production of respirators:

Straps	Braided Polyisoprene
Staples	Steel
Nose Clip	Aluminium
Filter	Polypropylene/Polyester
Shell	Polypropylene
Coverweb	Polypropylene

This Respirator does not contain components made from natural Rubber Latex
Maximum mass of products = 11.3g

Filter	Polypropylene/Polyester

Coverweb	Polypropylene

- **NO Intended** to be worn by operating room personnel during surgical procedures
- Always follow User Instructions and use in manners as indicated

Do Not Use for

- **DO NOT use in hospitals**
- DO NOT use for gases or vapors (i.e. anesthetic gases such as isoflurane or vapors from sterilant such as glutaraldehyde.)
- **DO NOT use in any manner in medical situations**

Use for:

THIS RESPIRATORY EQUIPMENT IS INTENDED TO USE IN INDUSTRY AREA AND SO ON.

Approvals and Standards*

- China GB2626-2006
- Meets requirements for a minimum 95% filtration efficiency against solid and liquid aerosols that do not contain oil.
- *FDA cleared for NO use as a surgical mask
Bacterial Filtration Efficiency F2101 >99% BFE

Fitting Instructions

Must be followed each time the respirator is worn. Before fitting device, ensure hands are clean.

See Figure 1 below.

All respirator components should be inspected for damage prior to each use.

1. Cup respirator in one hand with nosepiece at fingertips, pull the strips and separate.

2. Hold respirator under chin, with nosepiece up. 3. Locate the each strap around each ear

4. Using both hands, mould noseclip to the shape of the nose to ensure a close fit and good seal. Pinching the noseclip using only one hand may result in less effective respirator performance.

5. Check the strips, they should'nt be twisted.

6. The seal of the respirator on the face should be fit-checked before entering the workplace.

Respirator Models Removed from Appendix A

Updated: May 27, 2020

Respirator Models No Longer Authorized

These respirator models had been on the list of authorized respirators in Appendix A but no longer meet the EUA eligibility criteria and thus are no longer authorized.

Note: As outlined in the EUA, a respirator model with a removal date of May 7, 2020 is eligible for authorization under the revised third criterion if it has had particulate filtration efficiency assessed by NIOSH using a modified version of NIOSH's Standard Test Procedure (STP) TEB-APR-STP-0059 within 45 calendar days of May 7, 2020, and has results of NIOSH testing that indicate a minimum and maximum filtration efficiency greater than or equal to 95 percent. Respirators with removal dates after May 7, 2020 are not eligible for the revised third criterion. A respirator that meets the revised third criterion, or any of the other eligibility criteria in the EUA, is authorized and will be added to Appendix A as an authorized respirator once FDA confirms the eligibility criteria are met. Results from NIOSH's testing are provided at:

<https://www.cdc.gov/niosh/npptl/respirators/testing/NonNIOSHresults.html>.

- *FDA cleared for NO use as a surgical mask
Bacterial Filtration Efficiency F2101 >99% BFE

Fitting Instructions

Must be followed each time the respirator is worn. Before fitting device, ensure hands are clean.

See Figure 1 below.

All respirator components should be inspected for damage prior to each use.

1. Cup respirator in one hand with nosepiece at fingertips, pull the strips and separate.
2. Hold respirator under chin, with nosepiece up. 3. Locate the each strap around each ear
4. Using both hands, mould noseclip to the shape of the nose to ensure a close fit and good seal. Pinching the noseclip using only one hand may result in less effective respirator performance.
5. Check the strips, they should'nt be twisted.
6. The seal of the respirator on the face should be fit-checked before entering the workplace.
